                                                                         Arabidopsis trialiana BAC T7B11 from chromosome IV near 9.5 cM The T7 end of T7B11 is oriented toward the NOR and overlaps with T15B16, GenBank accession number AF104919. The SP6 end of T7B11 is oriented toward the centromere and overlaps with T10M13, GenBank accession number AF001308. There are no discrepancies found in these independently finished overlaps. The region from position 110064 to 110253 exists as single stranded and single chemistry. Please see the feature below for details.

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1999).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
